DETAILED ACTION

1. This action is in response to the Pre-Brief conference request filed 02-23-2009. Claim 21 and 31 been amended and claims 1-20 and 41-45 have been cancelled. Claims 21-40 are pending.

Examiner's Amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

3. Authorization for this examiner's amendment was given in a telephone interview with Mr. Aaron A. Fishman on 05-29-2009.

4. The application has been amended as follows:

31. (Currently amended) A wireless transmission system comprising: a plurality of hearing devices, each hearing device comprising a signal processing unit and an electro-acoustic transducer, the signal processing unit being operatively connected to the electro-acoustic transducer; means for transmitting a plurality of audio signals to the hearing devices, wherein each audio signal is transmitted at a predefined carrier frequency; each hearing device further comprising means for receiving at least one of the plurality of audio signals, said means for receiving at least one of the plurality of audio signals being removeably mechanically coupled to the at least one hearing

device, and said means for receiving at least one of the plurality of audio signals being operatively connected to at least one of the signal processing unit and the electro-acoustic transducer; means for remotely generating and wirelessly transmitting configuration parameters to the hearing devices, for configuring the means for receiving at least one of the plurality of audio signals; each hearing device further comprising means for receiving the configuration parameters, said means for receiving the configuration parameters being comprised in said means for receiving at least one of the plurality of audio signals; and each hearing device further comprising means for tuning the means for receiving at least one of the plurality of audio signals to an audio signal according to the configuration parameters, wherein the plurality of audio signals as well as the configuration parameters are transmitted wirelessly via independent transmission channels,

whereby the configuration parameters are transmitted at a predefined carrier frequency via a common transmission channel shared by all said means for remotely generating and wirelessly transmitting configuration parameters and all said means for receiving the configuration parameters.

ABSTRACT

5. The invention relates to a method controlling a transmission system composed of at least one transmitter ($S_1 \dots S_n$) and at least one receiver (1), a signal (S_{in}) which is modulated in amplitude, frequency and/or phase being transmitted through an information channel (120). In the invention, configuration parameters are transmitted

through a control channel (110 ... 113) to the receiver (1), said transmission through said control channel (110 ... 113) being independent of any transmission implemented through the information channel (120). On the basis of the transmitted configuration parameters, adjustments are implemented in the receiver (1), in particular relating to demodulating the signal (S_{in}) transmitted through the information channel. The invention furthermore relates to method applications, to a transmission system, to a receiver and to a hearing aid.

~~The invention furthermore relates to method applications, to a transmission system, to a receiver and to a hearing aid. Fig. 1.~~
